EDUCATION

- **University of Lagos - Bachelor of Science, Pure Mathematics** *Expected Graduation: August, 2026*
Relevant Coursework: Intro to Computer Programming, Software Workshop, Introduction to Information Processing, Programming in Python, Foundations of Sequential Programs

TOOLS

- **Programming Languages:** JavaScript, TypeScript, Python, Java
- **Libraries/Frameworks:** ReactJS, NextJS, ExpressJS, Spring Boot, RadixUI, MUI, Socket.io
- **Tools:** NodeJS, MongoDB, Redis, Docker, MinIO, Cloudinary, Redux, TailwindCSS, Git, Postman, VS Code

EXPERIENCE

- **CelerFi Inc.** November 2024 - Present
Frontend Engineer
 - **Constructed** responsive B2B Web3 financial dashboards using **Next.js and TypeScript**, accelerating pre-beta client demonstrations by 40% through production-ready interface delivery.
 - **Designed** high-conversion landing page sections showcasing smart infrastructure, achieving a 95+ Lighthouse performance score via optimized **SSR in Next.js**.
 - **Developed** fluid UI transitions for complex financial data visualizations by integrating **Framer Motion**, improving prototype engagement metrics by 25%.
 - **Pioneered** a scalable component library with **TailwindCSS and RadixUI** during the initial build phase, reducing ongoing front-end development time by 35%.
- **Nextvibeco** January 2026 - February 2026
Fullstack Engineer — Contract
 - **Engineered** a real-time chat and gamification engine handling 1,000+ concurrent users with <50ms latency using **Socket.io, Express, and Redis**.
 - **Architected** an automated RSVP pipeline, eliminating 6+ hours of manual effort per event via background queues in **Redis and MongoDB**.
 - **Enhanced** a custom photo watermarking feature processing 10+ high-res images in <2s, utilizing **Cloudinary and MinIO** for asset storage.
 - **Orchestrated** backend containerization, slashing developer setup time by 40% through isolated **Docker** environments and **Husky** pre-commit hooks.
 - **Spearheaded** the transition to an investor-ready platform, reducing event configuration time by 60% by integrating **OpenAI APIs**.

PROJECTS

- **AI-Based Image-to-LaTeX System** [Github](#)
Backend
 - Built an **ExpressJS** server that integrates the **Google Gemini API** to perform OCR, converting images of mathematical equations into **LaTeX code** with 95% accuracy.
 - Implemented **Multer.js** middleware to handle multiple file uploads, supporting up to 5 images concurrently.
 - Optimized **file processing** by using **Node.js fs module** to manage, process and store LaTeX outputs efficiently.
 - Applied robust **error handling** to manage API failures, invalid inputs, and file processing errors.
