EDUCATION

University of Lagos

BSc., Computer Science and Mathematics

Lagos, Nigeria

Expected June 2027

Coursework: Data Structures & Algorithms, Sequential Programming, Software Engineering, Statistics, Linear Algebra

TECHNICAL SKILLS

Programming Languages: JavaScript, TypeScript, Python, SQL, HTML/CSS

Frameworks & Libraries: React, Express, Node, Next.js, FastAPI, Tailwind CSS, Redis

Infrastructure & Tools: GCP, Azure, PostgreSQL, MongoDB, Redis, Docker, Git, Firebase, Supabase, REST APIs

AI Engineering: LLM Finetuning, Gemini, LangChain, Multi-agent LLM pipelines

WORK EXPERIENCE

Software Engineering Intern

March 2026 – Present

CelerFi

- Engineered responsive B2B financial dashboards in Next.js and TypeScript, automating previously manual demo workflows and accelerating feature delivery by 40
- Rebuilt landing page performance to a **95+ Lighthouse score** through optimized **SSR in Next.js**, **cutting load times by 30%** on smart-infrastructure showcase pages.
- Founded the team's first shared **component library** with **TailwindCSS** and **RadixUI**, **cutting ongoing front-end development time by 35%**.

Software Engineering Intern

January 2026 – March 2026

Nextvibeco

- Engineered a **real-time** event platform supporting **1,000+ concurrent connections** using **WebSockets and Redis** for low-latency state synchronization, achieving sub-50ms response times.
- Architected an asynchronous job-processing pipeline using Redis-backed queues and MongoDB, decoupling long-running tasks from the request lifecycle and **eliminating 6+ hours of manual work** per event.
- Containerized backend services with **Docker** and **Husky** pre-commit hooks, **reducing developer setup time by 40%**.

PROJECTS

Bukka AI

[View project](#)

- Originated and led the building of a three-agent LLM pipeline powering a Nigerian restaurant recommendation system, owning the core AI and backend build.
- Designed a ranking pipeline that scores restaurants against user preferences using weighted criteria extracted from restaurant reviews, improving recommendation relevance across multiple constraints.
- Placed **Top 8 of 400+** teams, winning **₦100,000**.

MathScribe

[View project](#)

- Built an **Express.js** server integrating the **Google Gemini API** to perform **OCR**, converting images of mathematical equations into **LaTeX** code with **95% accuracy**.
- Applied robust error handling to manage API failures, invalid inputs, and file processing errors.

Hotel Management System

[View project](#)

- Built a full-stack web app with **React**, **TypeScript**, and **MongoDB** for scheduling and managing hotel stays, with booking slot management and real-time status updates.
- Powered the backend with an **Express.js** REST API, styled with **TailwindCSS** and **Material UI**.
- Deployed on **Render**, delivering a production-ready hotel booking platform.

LEADERSHIP & EXTRACURRICULAR

3rd Place out of 100+: Microsoft AI Skills Hackathon - Built RiskGuard AI, a real-time telecom risk intelligence platform for MTN Nigeria, winning **\$500** and **prompting MTN to initiate collaboration calls** post-hackathon.

Top 10 of 500+: Enyata × Interswitch Buildathon - Built and pitched CraftID, a platform converting informal artisans' payment history into verifiable credit profiles.

Campus Ambassador, CowryWise — Grew brand awareness among **1,000+ students** through campus outreach, events, and Women-in-Tech initiatives.

Tech Team, MLSA UNILAG - Built and maintained the official website for the school's Microsoft Learn Student Ambassadors chapter.

Community Manager, IEEE UNILAG - Wrote monthly newsletters and organized community events (e.g., game nights) for a **800+ member** chapter.
